Tividence for proteolytic cleavage of the 120-kilodalton outer membrane protein of rickettsiae: identification of an avirulent function of the fice state of the 120-kilodalton outer membrane protein in processing.";

Infect. Immun. 60:159-165(1992).

C -i- FUNCTION: THE 120 kDa SURFACE-EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL VITULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.

C -i- FUNCTION: THE 32 kDa BETA PEPTIDE MAY SERVE AS A MEMBRANE ANC:

C -i- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY S-LAYER WITH HEXAGONAL SYMMETRY.

C -i- SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.
                                                                                                                                                                                                                                                                                                                             Matches

bacterium Bacillus
                                      в.,
```

+ FUNCTION: STILL UNKNOWN. NOT INVOLVED IN C MOTILITY, SECRETION OR DIFFERENTIATION. SUBCELLULAR LOCATION: MEMBRANE-ASSOCIATED. MAY ΒE

DOMAIN: HAS TWO LIGAND-BINDING DOMAINS; THE N-TERMINUS, HAS 101 AA REPEATS WHICH ARE RESPONSIBLE FOR CELL WALL BINDING; C-TERMINUS CONSISTS OF TWO BLOCKS OF RESIDUES WITH A CONSERV INTO THE MEDIUM. CONSERVED

MOTIF REPEATED 31 TIMES.
SIMILARITY: THE REPEATED MOTIF IN THE C-TERMINUS HAS SOME
SIMILARITY TO THE REPEAT IN E.COLI RHS GROUP OF PROTEINS (RHSA-D).

Secreted by an ABC transporter (type I) secretion apparatus.",
J. Bacteriol. 180:3062-3069(1998).

-i. FUNCTION: THE S.-LAYER IS A PARACRYSTALLINE MONO-LAYERED ASSEMBLY
OF PROTEINS WHICH COAT THE SURFACE OF BACTERIA. PROBABLY ACTS AS
PHYSICAL BARRIER TO PARASITES AND LYTIC ENZYMES.

-i. SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A SELAYER WITH HEXAGONAL SYMMETRY. SECRETED BY AN ABC TRANSPORTER
(TYPE I) SECRETION APPARATUS.

-i. MISCELLANEOUS: THE CALCIUM BINDING OF THIS PROTEIN MAY MEDIATE
SURFACE ATTACHMENT BY IONIC BRIDGING BETWEEN THE S-LAYER AND A
SPECIFIC MEMBRANE-ASSOCIATED OLIGOSACCHARIDE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE-89008089; PubMed-3049545; Fisher J.A., Smit J.K., Agabian N "Transcriptional analysis of the Capital Control of the Capital Control of the Capital Cap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nierman W.C., Feidblyum T.V., Laub M.T., Paulsen I.T., Nelson K.E., Eisen J., Heidelberg J.F., Alley M.R.K., Ohta N., Maddock J.R., Potocka I., Nelson W.C., Newton A., Stephens C., Phadke N.D., Ely B DeBoy R.T., Dodson R.J., Durkin A.S., Gwinn M.L., Haft D.H., Kolonay J.F., Smit J., Craven M.B., Khouri H., Shetty J., Berry K., Wolfa A., Vamchevan J., Ermolaeva M., White Salzberg S.L., Venter J.C., Shapiro L., Fraser C.M.; "Complete genome sequence of Caulobacter crescentus."; Proc.
